

Data Analysis of Industrial Engineering BSc Graduates

You can find an Excel file with the myEMU data of the Industrial Engineering BSc graduates. This Excel file consists of 4 sheets: the Graduates (Id, name, surname and their graduation dates), the Companies (Company id and company name), the WhoWorksWhere (Graduate Id, company id, work start and end date, the work city and the work country), and the WhoHadInternshipWhere (Graduate Id, company id, internship start and end date, the internship city and the internship country).

You will add two more sheets (if you wish you can add more sheets):

- 1- Add a new sheet to find who is working where right now. You need to use Excel functions in order to do that. Be careful that a graduate may have worked in more than one companies throughout the years. You need to find (by using Excel functions) the current work company of each graduate.
- 2- Add a new sheet to find our graduates who are working or have worked in a company that they also had their internship. You need to use Excel functions to do that. Be careful that in the WhoWorksWhere and WhoHadInternshipWhere sheets you also have information about other graduates (MSc programmes).
